Instructions for the Candy Cane Inlay Kit

(Red/White, Green/White, Red, Green and White)

Notice that on one end of each spiral piece there is a faint laser cut ring . Make sure all of the lines are at the same end (top or bottom) when assembling. This is used to orient the spirals in the same direction.

Carefully twist the individual spiral pieces onto the brass tube (or one of our silicone dowels). Once all 6 pieces are assembled and lined up well, wrap tightly with elastic bands to eliminate any gaps, remove the brass tube if you haven't done already and then brush thin CA glue on all of the seams.

. Once dry, sand the inside of the cylinder just enough for the brass tube to fit.

Glue the brass tube inside the cylinder using 2 part epoxy. Sand the ends flush with the brass tube and mount on the lathe for turning and finishing.
